

LAYERS FOR HAND SIGN:

- 1 Cut these pieces out of board. It is helpful to cut the fingers all at the same time (in a stack), so they line up perfectly. Be careful—never put your own fingers in the path of the blade. (Envision twice, cut once.)
- 2 Bend along the score marks (designated by the dotted line)
- 3 Stack the pieces and align them. Now put glue on the bent fingertip part of Middle-top and Middle-bottom. Glue to the finger tips of Bottom.
- 4 The Top layer sandwiches it all together, while allowing motion to happen at the top and the bottom. So only tape where indicated to "sandwich."
- 5 Try it out! You may want to put more joints (bends) in your fingers to make them more realistic.

THANK YOU FOR PROTESTING!

**THANK YOU FOR WORKING TOWARDS
A WORLD WITHOUT OPPRESSION!**

Sign is based on mechanics invented by Yoojinkim.com—consider buying some stationery from her rather than a big drugstore. You picked this up at The Arm—a community print space that makes my neighborhood and my world better. They print (or will train you to print) zines, books, posters, pamphlets, wedding invitations... and they run fun workshops and exhibitions.
